Answers for Homework 12

1. There is a storage clash
   When any account has a token balance of 109, which is the ASCII value of 'm' , the constant for Roles.Mint in own.cairo, that account can freely mint tokens, because the `can(Roles.Mint)` check will return TRUE. Similarly, if there's an account with a token balance of 98 (ASCII of 'b'), they can burn tokens.
2.   1. You should also check for zero and negative numbers
      2. Division (for the decimals) may not give you the result you expect.
3. See this gist
